EDUCATION

Purdue University

Bachelor of Science in Computer Science, GPA: 3.54

West Lafayette, IN

May 2026

EXPERIENCE

VertikalX

Sports athlete crowdfunding and sponsorship platform

May 2025 – Present

West Lafayette, IN – Remote

Head of Engineering

Nov 2025 – Present

- Own product development end-to-end for a platform serving **60+ athletes globally**, spanning architecture, data modeling, frontend UX, backend services, QA, and deployment, while leading a team of engineering interns across a **Node.js/NestJS/GraphQL** backend and **React/TypeScript** frontend
- Built the **VTX Index** end-to-end, a sponsorability score fusing an athlete's competition results, training data, and social performance into one number for donors and brands: a pipeline across **5 external APIs** (Strava, Apple Health, Polar, Instagram, race results), normalizing metrics against objective benchmarks with improvement and consistency modifiers under each provider's **ToS**
- Shipped a cross-platform **React Native (Expo 53)** app with **MMKV** caching (cold start 2-3s → <100ms) and 8 EAS Build profiles
- Rebuilt **CI/CD** from manual builds to **GitLab** automation (3+ hrs to 15 min) with automated **Kubernetes** deployments to preprod/prod clusters (self-managed via **kops** on EC2); manage all **AWS** infrastructure and cut monthly cloud costs 45%

Senior Full Stack Software Engineer

May 2025 – Nov 2025

- Built public-facing **marketplace UX** (multi-faceted filtering, data visualizations, infinite-scroll feeds) and **backend services** for auth, **Stripe** payments, and transactional workflows

Vibecode

Applied AI Engineer (Contract), AI agent platform

Jun 2026

New York, NY

- Shipped a feature to the production **main** branch of Vibecode's **AI agent** platform, ramping into a large, unfamiliar **TypeScript** codebase and delivering it end-to-end within days
- Owned features from spec through code review to merged, deployed changes across backend and **agent** work, applying **LLM** and agent-tooling work in **TypeScript** alongside the core engineering team

PROJECTS

Tonos – Voice Profile API | tonos.fyi

Mar 2026 – Present

- Built and launched an agent-native voice-profile API: a two-pass **Claude** pipeline extracts 16-dimension voice profiles from writing samples, and any agent calls the API to generate voice-matched messages, built on **TypeScript (Bun/Hono)**, **PostgreSQL + pgvector**, **Stripe** billing, and a custom **OAuth2 PKCE** server
- Built a full **MLOps** pipeline (**LLM-as-judge** eval with **Promptfoo**, pairwise **A/B testing**, automated **prompt optimization**, and **RAG** via **Voyage AI** embeddings), and shipped an **MCP server** (9 tools, Streamable HTTP), an **HTMX** UI, and OWASP-aligned security (prompt-injection defense, tenant isolation)

recense – Memory Engine for AI Agents | github.com/mbeato/recense

Apr 2026 – Present

- Built a self-hosted **memory engine** for AI agents (graph, vector via **sqlite-vec**, and episodic store in one **SQLite** file) with an **MCP server**, Claude Code hooks, and a cron-driven **sleep pass**; runs daily as my own coding-agent memory. **TypeScript**, **better-sqlite3**, **Claude + OpenAI**
- On **LongMemEval-S**, answers within about 10 points of full-context accuracy (**69.2%** vs 79.5%) while reading ~1% of the tokens at roughly **250x lower cost**; corrects contradicted facts in place (**84.6%** vs 0% for an append-only baseline) via **LLM-as-judge** tombstoning + **provenance** against self-confirmation

TECHNICAL SKILLS

Languages: TypeScript, Python, Go, Swift, SQL, C/C++

Frameworks: React, Next.js, Node.js, NestJS, GraphQL, React Native (Expo), Tailwind, Bun, Hono

AI / Agents: Claude, OpenAI, MCP, RAG (Voyage AI + pgvector + sqlite-vec), LLM-as-judge, Promptfoo, prompt optimization, Zod

Infra & Security: PostgreSQL, pgvector, Redis, Docker, Kubernetes (kops), AWS, Caddy, Hetzner, OAuth2/PKCE, JWT, Stripe
